Thread: [SQLMap - Scan website vulnerabilities](#)

Cyber Connection - *October 25, 2017, 9:08 am*

With SQLMap you can scan website vulnerabilities and not only hacking ready vulnerable links.

Type in SQLMap

Code `sqlmap.py --random-agent -u site.org --form --crawl=2 --batch`

`--crawl=2` -> scanning the structure of the site

`--batch` -> to make the process automatic

`--random-agent` -> arbitrary user agent

`site.org` -> the website link that you want to scan

and waiting for the scan results ?

Very nice spidering you may want to have a bit of a time delay on as not to have your IP blacklisted/banned but also keeping it to a depth of 2 you can't really over do it although the traffic on a large site maybe a bit. I saw SQLmate it searches a large number of sites for SQLi, might be worth a look .
