The-One - October 26, 2017, 4:07 pm

You have both Avast and Kaspersky installed, its recommended to have only one installed. I just saw this by looking into your log out of interest, en zag dat je ook nederlands was :D, and noticed this. GI with solving this :D!

Do you still need help with anything?

5chn4pp - October 29, 2017, 4:27 am

Please open up control panel and uninstall the following programs:

Browser-Security
PC Speed Up

iosua00111 - October 29, 2017, 8:40 pm

Yeah you can't have 2 anti-virus programs running at the same time, they trip each other off.

Hello Kitty - October 30, 2017, 12:16 am

i know that, relax.

Daoz-6 - October 30, 2017, 12:29 am

It sounds like a bitcoin miner/XMR miner.

As for removal.. do a HerdProtect scan, if that is clean, try Vipre REscue Scanner, if thats clean, upload any recently downlaoded files to VirusTotal and wait to AV sig update.

5chn4pp - October 30, 2017, 3:13 am

HerdProtect includes the Vipre engine so I would not see any reason for scanning with Vipre alone.

Undert@ker - October 31, 2017, 3:48 am

down load eset antivirus it is the best one i have ever used you get a month free that will kill your bots

Charles de Gaulle - October 31, 2017, 4:04 pm

Use 1 antivirus, not 2.

Download Eset and do a scan.

Golang - November 1, 2017, 12:58 pm

Why has no one suggested THIS yet.. download Process hacker or an alternate process explorer, sort by CPU usage and see what file is taking up all of the power.

This is so basic, come on WH section.

Haker2095 - November 5, 2017, 7:47 pm

yeah im 100% sure thats a bitcoin miner, when the malware detects you opened task manager the process goes away instantly, but if you try something different like proccess explorer, (a seperate piece of software) it will pop up and you cna locate the file and end the process and delete it.

Autowall - November 5, 2017, 8:03 pm

Mine does the same thing. Open up task manager and it would be at 44% and then drop down below 10%. I also know that I am not infected by any malware so I can say you are safe.

Same, people need to calm their tits. The process that's using the CPU is task manager as it enumerates through the running processes, and by the time it's done opening it goes back down.

(Nov 5, 2017 08:47 PM)Haker2095 Wrote: [\[CITE\]](#) yeah im 100% sure thats a bitcoin miner, when the malware detects you opened task manager the process goes away instantly, but if you try something different like proccess explorer, (a seperate piece of software) it will pop up and you cna locate the file and end the process and delete it.

Except it's actually probably not a miner. Apparently you don't know shit if you're %100 sure about that.

MaDTiA - November 6, 2017, 9:24 am

try to open process explorer : <https://www.predatorhosting.net/s5>

attach a screen

feel free to pm me your teamviewer id for further assistance

I actually burst out laughing. Why not link the actual clean version of process explorer from Microsoft?

<https://docs.microsoft.com/en-us/sysinternals/downloads/process-explorer>

Don't be a retard OP, this dude is sketch.

Thanks, i appreciate that :)

Ir1986 - December 6, 2017, 3:07 am

Happens to everyone DW...

BrBi - December 6, 2017, 5:49 am

I've did a very quick look at the scan, and it seems to me that your pc is full of crap... and maybe there are some viruses, like chromedriver.exe inside Temp folder...

also that OldSchoolRunescape link inside startup folder?

I mean Runescape launcher is starting when you're booting the pc? I don't know if it makes sense btw it might be a virus (I know there are viruses targeting runescape stuff, so it might be)
