Server-Aware Providers

UniDAC chooses the best way specific to the server to perform most operations. Every UniDAC data provider uses server-specific native connectivity. All operations with data are performed by providers automatically considering the selected database server peculiarities.

Cross-Platform Solution for Delphi, C++Builder, and Lazarus

UniDAC is a cross-platform solution for developing applications using various IDEs: RAD Studio, Delphi, C++Builder, Lazarus (and FPC) on Windows, Mac OS X, iOS, Android, Linux, and FreeBSD for both x86 and x64 platforms. UniDAC also provides support for the FireMonkey platform, which allows you to develop visually spectacular high-performance desktop and mobile native applications.

Note: This crack is only for Delphi.

Server-Independent SQL

When developing database applications that allow working with several databases, one of the key points is writing of server-independent SQL. In UniDAC, the server-independent SQL support is implemented by means of the powerful macros engine, producing dynamic SQL by replacing parts of the query statements with user-defined code.

Access Cloud Services

UniDAC allows developing applications that work with data stored in such Cloud services as: BigCommerce, Dynamics CRM, FreshBooks, Magento, MailChimp, NetSuite, Salesforce, Salesforce MC, SugarCRM, QuickBooks, Zoho CRM. For this, it is enough to use UniDAC ODBC provider with any [Devart ODBC drivers for Clouds](#).
