Thread: [Imminent Monitor run on Startup issue](#)

ibtrouble_68 - *October 27, 2017, 10:03 pm*

I recently purchased Imminent Monitor 5. I have my port forwarded and able to compile the rat. When I test it on my VM it works great. I am able to do everything. The issue I have is when I restart my VM the rat does not restart. I have the "Ensure Client Remains on Startup" checked under Module Protection.

Does the "Client Startup" section need to be filled out also? And if it does what do I need to put in there? Any help would be appreciated.

IM5 works great except for that one issue. Def worth the money.

Thanks
