Thread: [\[FREE\]\[100% AUTOPILOT\]Make autopilot BTC while you sleep](#)

Musta Barbaari - October 28, 2017, 12:44 am

I am not sure if this has been posted here before but didn't find it via search so I thought I'd share it with you. I have been using this for a little time now and yes it is not a get rich quick thing, you might not even make a buck a day from this but hell it's autopilot. So why not? If you leave it running in the background you can do whatever you like on your computer without it getting laggy or freezing.

So whats the program?

What does it do?

It mines cryptocurrencies in the background while you do your normal stuff on your computer. The program is also customizable with different settings so you can make it put as much or as little work in as you like. It also has a smartminer setting which uses little resources while you are using your computer and can be set to start using for example 90% of your resources after 1 minute of you going away from keyboard.

They claim that an average computer generates 22.80\$/month and a gaming computer can generate up to 78\$/month. So as I said its not a get rich quick thing but every little helps. This might not be the thing for those guys who have a way to create steady income of 100\$ a day but for starters it is a good added extra. So why not join today and test it out!

NOTE: I do not have a payment proof yet since I just recently started using this but will post one as soon as I reach the required amount to cashout. All comments appreciated :)

it might not be profitable, it really deppends on the amount of electricity you would be paying.

Yin Yang - October 28, 2017, 5:51 am

Is there a minimum payout?

I saw calculations somewhere that it might add like 10-15\$ to you bill montly. Not 100% sure though but since it is running in the background while your computer is normally on anyways it shouldn't affect your power bill that much.
