Thread: [PC won't boot](#)

bazanik - October 30, 2017, 8:15 am

Hi!Ever since yesterday I cannot properly start my PC.Everytime i try to boot it shows first the "Start windows normally" screen after i press that it goes to the windows logo halfway through then bluescreen and back in the loop.I had this problem before and i fixed it by switching from IDE to AHCI,now it doesnt work even with that.Its windows 7 x64,I didnt do anything differently it just started bluescreening out of nowhere.

Video of the process <http://gph.is/2uamiSR>

Thank you for the help!!

Did you try reinstalling windows?

EPLS - October 30, 2017, 8:17 am

Can you use some video playback software to pause at the bluescreen and upload a screenshot of it? I can't determine the issue without this.
