Thread: [EternalBlue Metasploit error](#)

fogstone - November 2, 2017, 12:17 am

I was trying to hack my windows laptop from a kali VM using the Eternal Blue exploit. I followed this video:

<https://www.youtube.com/watch?v=cauCimthNTA>

I was following it exactly and got to the part where I was using metasploit. Then, I got this error which I think means something is wrong with metasploit:

```
Code msf > use auxiliary/scanner/smb/smb_ms17_010
```

```
[-] Failed to load module: auxiliary/scanner/smb/smb_ms17_010
```

Why isn't metasploit working? I am using a VM of Kali 2.0. Should I upgrade Kali first maybe? What is it I'm doing wrong?

Thanks.

Best,

fogstone

msfupdate

```
use exploit/windows/smb/ms17_010
```

Don't use the aux.

are you having the module copied to the location auxiliary/scanner/smb/ ? if not just copy the file from [github](#) and paste the copy in this location auxiliary/scanner/smb/ and then try to run the command
