just bought it, the method is so strong and easy to do, i can now re-fud my crypted file after it get detected, i also learned how to crypt a rat using his method :)

crypting method 10/10
spreading method 8/10
refud method 9/10
design of the ebook 7/10
silent exploit builds 8/10

overall 8/10

if you are looking to fud a rat by yourself, just buy this ebook and vaxton will help you to do it!

(Feb 9, 2018 06:22 AM)JonathanZ Wrote: [\[CITE\]](#) Vax is one of the most kind people I've ever met on HF! No doubt he will help you, even no doubt he will teach you other ways if this one doesn't work out. I am now fully able to crypt my stub 1/37! scan + runtime FUD. It's better then most crypters out of here. And for a fraction of a price of a crypter.

We even did a TV session of 3h which included teaching, talking and some RAT victim trolling!

Huge vouch for Vax, don't hesitate do deal with him! HQ guy!

(Feb 14, 2018 03:43 AM)neverdos Wrote: [\[CITE\]](#) Vaxton is a great and friendly guy! Especially if you're new to the hacking/ratting scene and need guidance, he's the man for you. He responds to messages fast, which is pretty rare around here. As a matter of fact, I was surprised he dedicates so much of his time to mentoring. We did a couple of long Teamviewer sessions. On the first one, after 3 hrs I wanted to go to bed as it was really late, but he wanted to make sure I got the lesson well :)

He guided me through setting up a rat, chose the best one for my purposes, and showed me his crypting methods (you need to get live with him to get the whole method). He'll also teach you how to protect your network pro-style.

I got 1/37 detects crypting by his method:

He is really patience and tells u exactly how it works and what u supposed to do.

Its not only 1 method or ebook. I think this wont be patched because he is teaching u exactly how to do it yourself in the future.

It's all about vb.net, and it's a easy/basic crypting method where you can easily recrypt by changing few things only.

After you get your crypted file you'll be able to obfuscate it and get a virus scan 4/38 or less.

book has been updated! whoever purchased it, please contact me with your serial-code.

the price has been increased since i added a lot of new things to the e-book, such as silent exploit + a full scantime FUD + a UD runtime which is avast + esetnode + one more (iforgot) the only engine that detect it on runtime.

you'll be able to create your own fud stub and refud it when it become UD.

pm me i can use teamviewer to show you how it's done "not the method but the background of the method + results)

note: whoever purchase my e-book please contact me.
the 25.99\$ is not only about the e-book.

you'll get 2 hours session with me though teamviewer and i'll explain and show you how all crypters works, and i will teach you how to make your own server FUD using different ways.
you'll also get my spreading method, plus as much you want of silent exploit builds and my support ofcourse :)

I am now fully able to crypt my stub 1/37! scan + runtime FUD. It's better then most crypters out of here. And for a fraction of a price of a crypter.

We even did a TV session of 3h which included teaching, talking and some RAT victim trolling!

Vaxton is a great and friendly guy! Especially if you're new to the hacking/ratting scene and need guidance, he's the man for you. He responds to messages fast, which is pretty rare around here. As a matter of fact, I was surprised he dedicates so much of his time to mentoring. We did a couple of long Teamviewer sessions. On the first one, after 3 hrs I wanted to go to bed as it was really late, but he wanted to make sure I got the lesson well :)

He guided me through setting up a rat, chose the best one for my purposes, and showed me his crypting methods (you need to get live with him to get the whole method). He'll also teach you how to protect your network pro-style.

I got 1/37 detects crypting by his method:

nope it will never be patched :)

even if it got patched, you'll be able to create your own method to make your rat fud.

ill teach you how to build your own private fud stub, and you'll be able to understand how does crypters work.

i'll help you using teamviewer from 0, till you can be able to make your server.exe FUD runtime/scantime :)

after you'll learn my 2 methods,you will be able to create more methods.

I can vouch for this guy, he knows what he is doing!

I have spend hundreds of dollars buying crypters and now i know it was all a big waste of money!

We had 2 teamviewer sessions and i can crypt my stub by myself now. It has only 1 detection on both runtime and scantime by eset(im trying to get that 1 scantime detection away).

He is really patience and tells u exactly how it works and what u supposed to do.

Its not only 1 method or ebook. I think this wont be patched because he is teaching u exactly how to do it yourself in the future.

Big vouch for Vaxton

After you get your crypted file you'll be able to obfuscate it and get a virus scan 4/38 or less.

book has been updated! whoever purchased it, please contact me with your serial-code.

4/38 is pretty easy to get tho. Only Quick Heal, ESET, IKARUS and Kaspersky seem to detect my stub.

I know which part of the code triggers the detection... I just haven't quite figured out how to bypass them with something less obvious... I'm such a skiddie. ?

Since mentoring me into making it FUD would take less than an hour, would you be able to give me a better price? ?

Nice service you got going, GLWS ?

PS: (Only respond if you can actually make it FUD tho, 2 detections is still 2 too much to pay for imo :P)

This however caught my attention because I'm stuck at 1/38 detection, and desperate as fuck, so I was pleasantly surprised when I noticed your signature. (you can probably guess ESET is the problem). ?

Now you can imagine how I would be rather annoyed if this entire e-book wouldn't yield any positive

Therefore, my question:

Do you guaranteed a refund if I don't make any progress (=Run-Time FUD)?

I get a {MALWARE} detection, which changes to a {a variant of MSIL/GenKryptik.BCYB trojan} detection if I remove my junk code.

Sorry for the slow response btw, had totally forgotten about it.
