Thread: [JS extension that creates 'designed' text?](#)

Not Your Average Orange - November 3, 2017, 7:50 pm

I remember seeing this extension somewhere

Basically there are pre-made text designs that you can apply to your html. Here's an example:

<https://imgur.com/i690njm>

Anyone know where I can find it?

Sorry, I'm not really sure how to explain it. Basically it gives your HTML text 'styles', like for example in a thought bubble, or a rainbow star, ect.

You're looking specifically for a Javascript library that does this? Sounds more like a CSS library, if that's even a thing.

Doesn't matter what language, just a library that does that ?

Captain P. - November 4, 2017, 2:49 pm

OP are you speaking about tooltips with emoticons?

CSS isn't really a language, but regardless. I think this is what your looking for?? Just search for CSS shape library or something.

something like this maybe

Code <http://textillate.js.org/> or this

Code <http://tobiasahlin.com/moving-letters/>
