Thread: [Jacking Twitter Accounts](#)

Stonelsland1337 - November 5, 2017, 2:50 am

Hi, i've tried bruteforcing with kali linux to try and crack twitter accounts, some people I know told me that instead of bruteforcing I could try social engineering, does anyone know how to jack twitter accounts by social engineering, I would ask the guy who told me but he wants \$15 just to tell me how lmao. thanks.

Hey,

You can use the SE after that create a phishing page.

How did you try it?

Well first of all i'd try sending an e-mail from a spoofed address that tells the target that there is a security issue or something with their account and they have to reset the password. That may work.

Do you have access to their network?

If you do try a dnsspoof attack and use setoolkit to make a phishing page.
