Thread: [Header Nav Menu Challenge](#)

Omniscient - November 7, 2017, 9:49 am

The community is having a problem on different mobile devices with the way the menu operates and displays. I'm calling on the community for assistance to help resolve this faster than I would. Since I'm getting a lot of complaints and I haven't yet fixed this and I'm sucky at javascript I may as well ask for community help.

Here is the challenge. I want that navigation system we have. The header menu is going to stay. However, it doesn't function perfectly across some iPhone devices. Some report that it's fully open on each page. Others show screenshots where the nav isn't 100% width across the top.

Initially I was using initial-scale=1.0 for the viewport meta tag but I keep playing with it to see how it effects the mobile page. Right now viewport is .75 because members complained about the forum being zoomed.

Here is the files it uses:

<https://hackforums.net/jscripts/topnav.js>

<https://hackforums.net/cache/themes/theme10/topnav.css>

Our current viewport meta.

```
<meta name="viewport" content="width=device-width,initial-scale=1.0" />
```

And yes, I used a library and altered it for my needs. I am not ashamed of using a library, everyone does that. And for anyone who uses jquery, you're using a library too.

<http://cssmenu maker.com/menu/jquery-responsive-dropdown-menu>

So any pros that can help? I, and the community, would certainly appreciate it.

AutoWorld - November 7, 2017, 9:50 am

Wishing I wasn't a scrubber and had some skills to help xD

Crystallize. - November 7, 2017, 9:58 am

Can't you add hamburger menu for phone users? Would solve it all.

Or make the nav menu vertically for phone users?

I think one of those would fix our problems.

Or you want it to be same look even on phone?

Hackbase - November 7, 2017, 10:25 am

I think you should try a different source code, the one you are using right now is 3 years old and won't work very well with latest devices. I found a better one.

<https://www.smartmenus.org/download/>

Demo: <https://www.smartmenus.org/about/themes/>

Without jQuery

Demo: <http://bacsoftwareconsulting.com/blog/wp-content/uploads/2015/01/menu-demo/>

<http://bacsoftwareconsulting.com/blog/index.php/web-development/how-to-create-a-responsive-menu-without-jquery>

Elitas - November 7, 2017, 10:31 am

I might be totally wrong, but I've had success before with changing the display. You have display style set on the "" tags. Try changing it to "relative" or "inline-block".

Identical - November 7, 2017, 10:31 am

Try changing the position values to "fixed" and play with it. Some need a "fixed" position over a "absolute" position.

THC - November 7, 2017, 10:49 am

(Nov 7, 2017 10:49 AM)Omniscient Wrote: [\[CITE\]](#) Here is the challenge. I want that navigation system we have. The header menu is going to stay. I don't know if you're currently altering the code but I see this on android 6 with firefox:

<https://i.imgur.com/ZwOX1bj.png>

Jquery is a PITA.

Omniscient - November 7, 2017, 10:54 am

@Crystallize. - Thanks for your help. He gave me some updated code that I have working right now.

Still in the process of trying to get this resolved and eventually it will be. I ask that members show patience while I try my hardest to improve and perfect our navigation for all devices and browsers (some task!).

Quote:Try changing the position values to "fixed" and play with it. Some need a "fixed" position over a "absolute" position.

Nope, made it much worse.

Quote:I don't know if you're currently altering the code but I see this on android 6 with firefox:
Yes, I'm aware that on certain mobile browsers this isn't working correctly.

I may just need to use a completely different menu system. This one may not work as we need it to.

Views - November 7, 2017, 11:10 am

Personally I use Hack Forums a lot via safari on my iPhone and everytime I browse a new page from there it extreme zooms me into making the menu look full screen, I will say forsure that the new menu looks way cleaner, glad to see you trying to make this perfect for everybody :)

Hackbase - November 7, 2017, 11:13 am

I think you are having main issue due to :hover option in case, it doesn't work on touchscreen devices. Current code is very old and practically useless on new devices.

Yeah I get this a lot it zooms in on everything glad to see its looking to be fixed

Omniscient - November 7, 2017, 11:30 am

Obviously working on it. Kind of screwed up right now but again, working on it.

iExploits - November 7, 2017, 11:38 am

I would also like to point out that for me on my iPhone, the page is zoomed in on page refresh.

It's zoomed in to the top right corner where the width goes across the nav bar (which is at like 60% of the page).

FamousHater - November 7, 2017, 12:02 pm

(Nov 7, 2017 12:38 PM)iExploits Wrote: [\[CITE\]](#) I would also like to point out that for me on my iPhone, the page is zoomed in on page refresh.

already been stated. it does that for everyone that's on an iOS device.

+mK - November 7, 2017, 12:29 pm

I'll throw you guys a bone. I'm currently at work and can't give you guys a hand, but within Google Chrome, press CTRL + SHIFT + I, then CTRL + SHIFT + M to switch the aspect ratio to multiple devices or one that you'd like to mess around with. As I see it, the default iPad resolution is having some issues. If this isn't fixed by the time I come home, I'll mess around with it.

B?ker - November 7, 2017, 2:21 pm

Here something I threw together - <https://i.imgur.com/htgFORg.png>

Regarding the issue with the zoom - you might want to look into just implementing some sort of a grid system to make the entire site mobile responsive. I can easily help you with this. My personal favorite is Bulma - <https://bulma.io>

False King - November 7, 2017, 2:35 pm

(Nov 7, 2017 01:02 PM)FamousHater Wrote: [\[CITE\]](#) already been stated. it does that for everyone that's on an iOS device.

I'm on Android, and it does the same for me. So it's not an iOS issue.

BritishKitten - November 7, 2017, 3:05 pm

(Nov 7, 2017 03:21 PM)B?ker Wrote: [\[CITE\]](#) Here something I through together - <https://i.imgur.com/htgFORg.png>

Regarding the issue with the zoom - you might want to look into just implementing some sort of a grid system to make the entire site mobile responsive. I can easily help you with this. My personal favorite is Bulma - <https://bulma.io>

I might be wrong but I don't think he needed CSS help.

B?ker - November 7, 2017, 3:10 pm

(Nov 7, 2017 04:05 PM)BritishKitten Wrote: [\[CITE\]](#) I might be wrong but I don't think he needed CSS help.

No reason to use JS to make a nav tho, my example was pure CSS

Jimmie - November 7, 2017, 3:41 pm

On my android version the menu is fine just the forum doesn't resize.

Butane - November 7, 2017, 3:44 pm

The menu is responsive but the enter site wasn't. Great job for the effort. ?

Identical - November 7, 2017, 5:24 pm

```
Code jQuery(document).ready(function($){
```

```
/* prepend menu icon */
```

```
$('#nav-wrap').prepend('<div id="menu-icon">Menu</div>');
```

```
/* toggle nav */
```

```
$("#menu-icon").on("click", function(){
```

```
$("#nav").slideToggle();
```

```
$(this).toggleClass("active");
```

```
});
```

```
});
```

For the CSS, make the width of the viewport less than 600px, then make sure to set #menu-icon attribute to display:block.

imanode - November 7, 2017, 6:22 pm

We have a MyBB forum, find people there and offer them free upgrades or drugs and they'll help. (@nasyr)

_wind - November 7, 2017, 8:25 pm

To fix menu fully opening on every page, change

Code `cssmenu.find('ul').show();`to

Code `cssmenu.find('ul').hide();`on line 49 of your `topnav.js`

For the menu, the goal is to keep it readable while scrolling with the content. Make the following CSS and JS changes:

CSS:

```
Code #cssmenu, #cssmenu.smallscreen {  
    position: absolute;  
    width: 100vw;  
    top:0;  
    left:0;  
}
```

Javascript:

```
Code var leftOffset = parseInt($("#cssmenu").css('left'));  
$(window).scroll(function(){  
    $('#cssmenu').css({  
        'left': $(this).scrollLeft() + leftOffset  
    });  
});
```

`$("#container").css("margin-top", $("#cssmenu").height());`The CSS pins the navbar to the top, while the JS makes it scroll with the page while also shifting down the content covered by the navbar.

Demo: <https://jsfiddle.net/yhygp65d/>

It says it is fully customizable, @Omni, do something like this rather than have the NAV bar universal on all platforms, trust me I guarantee if mobile works on a separate code from desktop it will bump. Look at all the members complaining and working around the nav bar on desk top (Adams userscript is one example) and if you can closely resemble the theme but on mobile it will

be amazing. No tapatalk shit but you know.

False King - November 8, 2017, 8:29 am

(Nov 8, 2017 07:26 AM)Orchid Wrote: [\[CITE\]](#) It says it is fully customizable, @Omni, do something like this rather than have the NAV bar universal on all platforms, trust me I guarantee if mobile works on a separate code from desktop it will bump. No tapatalk shit but you know.

It costs way less time to actually fix a navbar than to fully restyle a completely different source for mobile, let alone all the custom alterations on the theme Omni does to add extra features. With current technology it's really no problem to create a cross-device menu.

DuelPit - November 8, 2017, 9:00 am

Good luck to the users that will participate, wish I knew javascript.

Orchid - November 8, 2017, 9:21 am

Some Ideas I found:

<http://www.thethinkingatheist.com/forum/Thread-GoMobile-Mod-Mobile-Navigation-Update>

<http://responsive-nav.com/>

<https://slideout.js.org/>

Maybe any of these?

Dave Skylark - November 8, 2017, 9:35 am

Change .75 to .25 and see if you like it.

No longer a opening menu, but looks better imo.

???? - November 8, 2017, 9:36 am

Hey is this fixed yet? I work on this stuff all the time, I can make it work fine for HF.

To be honest, I agree with some of the points others are making here. While fixing the topbar would be a good start, the theme isn't suited for mobile.

Either a new mobile theme should be made, or the current css and stylesheet will need some work.

The stylesheet itself wont need much work, just some additional class names to make it compatible with css @media, the harder part would be coding the css below a certain width (600px width maybe?)?

That way, the forum wont be so small on devices anyways, and the topbar would make sense for mobile. You could also make it sticky for mobile if you want pretty easily, setting its position to absolute and adding a top padding to the rest of the page.

Hoodie+ - November 8, 2017, 9:39 am

How about you use something like Bootstrap? Or you don't like 3rd party stuff?

I don't think the navbar is that important though, when can we expect trust scan to be available?

???? - November 8, 2017, 9:43 am

Third party isn't necessary and it just adds an unnecessary layer of code that otherwise isn't needed here.

Probably after the theme is mostly fixed.

Hoodie+ - November 8, 2017, 9:51 am

(Nov 8, 2017 10:43 AM)???? Wrote: [\[CITE\]](#) Third party isn't necessary and it just adds an unnecessary layer of code that otherwise isn't needed here.

Third party isn't necessary? He used a 3rd party plugin to make this theme so why wouldn't he use Bootstrap?

The only downside I can think is the size of Bootstrap.

Omniscient - November 8, 2017, 9:52 am

Unfortunately after my car accident I can't think well enough to answer most of you but I think it should be clear that the solution is neither simple or obvious. It's going to take some work. I can't do anything now. I fear breaking things more than fixing them.

Maybe in 1-2 days I'll be much better and we can resume this.

You changed the design, but all the issues are still there:

(Nov 8, 2017 01:04 PM)Maxim Wrote: [\[CITE\]](#) Solid work. Good job. Can you fully zoom out? Or is there a limit.

Looks like you got shit done.

Zooming out breaks it :/

From experience, there is no way of keeping one element responsive while others static.

The best solution here would probably just be to make the navbar fill up the entire window, which would require dynamically setting the width of the navbar to the width of the content:

```
Code $(document).ready(function() {  
    $("#cssmenu").css("width", $("#container").width());  
})
```

Designer - November 8, 2017, 4:59 pm

I would opt for a sidebar, with 2 levels max. You're now using way to many links for this mobile menu.

Have the navigation below the header/logo instead of above.

Sidebar = scrollable when a dropdown is open.

Either have the site content move to the right or have the sidebar move over the content.

Don't have the animations like you had before, just slide the whole sidebar in.

Only JS required will be to open and close the sidebar and optionally for a dropdown, few lines of code, everything else just CSS.

I have personal things going on in my life right now and no time, but this should be very very easy. Many good developers around here, so I'm sure someone can write something up.

And again, I would advise against using the current navigation design where the links dropdown from the top.

Also quick edit:

You'll keep the problems with scrolling horizontally since the content has a min width and isn't optimized for mobile. Not much you can do about that.

Just have the sidebar fixed when it's open.

wit - November 8, 2017, 5:10 pm

Oh boy, this is my chance.

I'll write something up tonight after i leave the library.

Everyone seems to be in the right direction, so far!

minimalist - November 8, 2017, 5:18 pm

```
Code $(document).ready(function() {  
    $("#cssmenu").css("width", $("#container").width());  
})
```

The scrolling problem isn't the only one. Mobile optimized websites are not made to scroll horizontally and zoom out. It just breaks everything.

Don't try to make the navigation bar mobile friendly if the rest of the website isn't. It's nonsense.

Fire - November 9, 2017, 2:59 am

Proof of concept:

<http://recordit.co/3iGdxWYGQX>

Scrolling and zoom out problems:

I made a solution that is Javascript free, and 100% CSS. Add this anywhere

```
Code @media (max-width: 768px) {  
    #cssmenu {  
        position: fixed;  
    }  
  
    #container {  
        padding-top: 50px;  
    }  
}
```

The main issue with using Javascript hacks is that it's unreliable, and the reason we even have to use Javascript hacks is because of the format of the body & html tags and how the content inside spans outside the allocated screen. Therefore, when you assign 100% width to the CSS menu which is a child to the body tag, it won't be able to "stretch" outside the allocated screen.

By using the fix above, we really avoid Javascript and make a simple and reliable solution that works across all screen sizes.

You may not want the "sticky" navigation bar, but it's possible to solve, not posting that yet but it's possible to remove that behavior.

Menu always open on some devices

The issue is in line 70 & 81 topnav2.js which is caused by the usage of `$(window).width()` which is known to sometimes return invalid width values. How is this a problem? On some screen sizes, the function to resize is not executing due to the value returned from `$(window).width()` being invalid.

How do we fix this? It's really simple.

Replace

Code `$(window).width()`

With:

Code `window.outerWidth`

Owl - November 9, 2017, 10:15 am

You could always set the width at runtime:

Code `$('#cssmenu').css('width', $(document).width());`

Omniscient - November 9, 2017, 12:12 pm

Quote:From experience, there is no way of keeping one element responsive while others static. Which is the major problem.

Quote:The best solution here would probably just be to make the navbar fill up the entire window, which would require dynamically setting the width of the navbar to the width of the content:

I'll continue to try a few things. Unfortunately I'm put behind a couple days because of my accident and now I see there is a MyBB update too. More work to get done which I didn't plan for and don't have time to complete. Ugh.

I know I want this navigation fixed but it's intermingled with the larger problem of HF MyBB theme not being mobile compatible.

I can spend hours toying around with this but I must first attend to the many support problems and other fixes we need to get done.

Quote:Don't try to make the navigation bar mobile friendly if the rest of the website isn't. It's nonsense.

I mainly agree. I do think that if you make your navigation well that from there you can work to make other elements mobile friendly. Navigation is a good starting point imho.

Grateful to everyone with their input and suggestions. They are very helpful. Some excellent suggestions which I will try once I have the available time.

Alexander K - November 9, 2017, 12:15 pm

I can't help but think that perhaps you should have waited for XF2. Sure it would have pushed the progress back a few months, but you'd have a mobile friendly site out of the box and a modern forum at that.

Omniscient - November 9, 2017, 12:21 pm

I'll probably have time this weekend, in which I might be able to toy around with making the site mobile responsive.

Omniscient - November 9, 2017, 1:12 pm

(Nov 9, 2017 01:50 PM)Wessel Wrote: [\[CITE\]](#) I'll probably have time this weekend, in which I might be able to toy around with making the site mobile responsive.

I really question how it's possible given we have so many elements on the page. We are not by design mobile friendly. It's like trying to fit a square that's too big into a small round hole.

False King - November 9, 2017, 1:20 pm

(Nov 9, 2017 02:12 PM)Omniscient Wrote: [\[CITE\]](#) I really question how it's possible given we have so many elements on the page. We are not by design mobile friendly. It's like trying to fit a square that's too big into a small round hole.

With a lot of media queries you'll come a long way. The index and thread list will be fairly easy. Thread view will be a bit harder because of indeed all the elements, of which all of them are important (for example, donators won't be happy if awards are hidden) so removing elements will be out of the question. I'll give it a go, not sure if I can pull it off though. I'll do my best.

False King - November 9, 2017, 1:23 pm

(Nov 9, 2017 02:21 PM)Alexander K Wrote: [\[CITE\]](#) If I were you I would go ahead and plan it. And to make the grapes even sweeter, you'd have paid support from XF if you did need any help with such a huge merge. But it would be really nice to see the site running XenForo. All kinds of new features, all kindzzzz

Even though XenForo is great forum software, I think it will take away from the charm of HF. But that's a totally off-topic discussion.

???? - November 9, 2017, 7:49 pm

(Nov 9, 2017 01:15 PM)Alexander K Wrote: [\[CITE\]](#) I can't help but think that perhaps you should have waited for XF2. Sure it would have pushed the progress back a few months, but you'd have a mobile friendly site out of the box and a modern forum at that.

The good thing is that the next XF2 release will most likely be RC, with full release coming a few weeks after that. It already has a solid base of plugins too and works out of the box for mobile.

Unless everything else can be fixed, I'd go this route. The only thing I'd worry about if I were Omni are all the custom db tables and columns that might not be properly converted over, they might require manual work to get working with their plugins or built in features. Easier than jumping through mybb hoops, though.

D3xus - November 10, 2017, 7:30 am

I'm going to take a crack at this today. I'll work on making the navigation responsive, and also work on the forum structure being more responsive as well. Don't think it will be too hard with CSS and a sprinkle of JS.

EDIT: Progress has been made. The general forum view is now much more responsive and easier to use on mobile. The menu also pops out just fine.

View a screenshot [\(Click to View\)](#)

Menu in action ([Click to View](#))

Still have to debug it on my phone, and make sure other views also come out OK. I'll keep posting here, but I'll only post the full code once it's completely done and I'm confident in it.

D3xus - November 11, 2017, 7:56 am

Ok. I've made a bit of progress. Thread and forum views work. User CP, Extras page are broken. This can be put in a media query so it only kicks in for small screens.

```
Code /* Essential formatting fixes for borders and columns*/
* {
  border-collapse: collapse;
  box-sizing: border-box;
}

/* Consistent widths */
#cssmenu.small-screen, #container {
  min-width: 100%;
  max-width: 100%;
  width: 100vw;
}

/* Fix text bleeding from the edge of its container */
td {
  white-space: normal !important;
}

/* Keep the navigation menu on the top of the screen */
#cssmenu.small-screen {
  position: fixed;
  z-index: 4212007;
}

/* Site logo should only be 100% width of its parent */
#logo img {
  width: 100%;
}

/* Padding for the page container */
#container {

(Nov 11, 2017 08:56 AM)D3xus Wrote: [CITE](#) Ok. I've made a bit of progress. Thread and forum

views work. User CP, Extras page are broken. This can be put in a media query so it only kicks in for small screens.

Media query isn't working when you zoom on a mobile device which is the problem I think.

Why not just use the same class as the nav bar with the user cp in it ?

Omniscient - November 11, 2017, 9:51 am

Because I don't have time to perfect this in the next few days I'm going to revert it for now. I'll have that done in the next hour or two. For now we'll just go back to how it was.

Quobi - November 11, 2017, 11:24 am

What if you'll keep it this way for PC and implement that menu only for mobile devices? You shouldn't sacrifice PC's overall experience just for the shake of mobile optimization. If you already pointed out why sorry in advance, just ignore me.

Omniscient - November 11, 2017, 11:13 pm

Sorry guys but I won't be using this version of the navigation. We will be reverting to tabs.
