<https://github.com/baSSiLL/SharpAvi/blob/master/Sample/Recorder.cs>

Im using SharpAvi with AddMotionJpegVideoStream but colors/contrast is too dark when taking single screenshot and compare it to .avi video produced and in example in video youtube dark theme looks like its full black instead of dark grey.

Any ideas how to fix?

gigajew - November 9, 2017, 8:13 pm

This would be something that you'd have to take up with the developer

Can you post an example screenshot?

Also, as gigajew said, it might be better to post an issue here:

AddMotionJpegVideoStream has very poor quality even i used max quality value so i changed to AddMpeg4VideoStream (x264 codec) much better!
