I have 2 working domains, version 1.3. By purchasing you will get panel files, executable file, control over the domain. Domain is paid untill december 2018, you will be able to redeem it.

I can set up it on VPS and show you how it works, i can prove you that its not cracked shit, all features/tasks are working smoothly.

Price: 70\$ usd

We can deal trough middleman.

this is a bad deal honestly, 70 dollars for a 75 dollars license

z3ro-cool - November 12, 2017, 4:38 am

Lukasu wtf you talking about lol, zyklon is no longer for sale so you cant buy it for 75\$

StackFramed - November 12, 2017, 6:11 am

Version 1.3? Most recent version is 1.4. Why is it downgraded by one version?

z3ro-cool - November 12, 2017, 7:05 am

Because owner is no longer active and i cant upgrade it to 1.4

Check zyklon thread, autobuy is not working for few months, you cant buy it from the coder

oh i thought the owner was back, it's still not a good deal this means you not only have the old version you also have no support from author.

and only few people got 1.4 version and i saw changelog and there is not rly new things in it...

about support, i can provide it, and author is not longer active so there is no support.

please lukasu go post your bullshit in another thread, thank you

Version 1.3 no working recovery password :v

z3ro-cool - November 12, 2017, 4:03 pm

depends on the browser, last time i checked it worked with newest chrome

SIM-3132187 - November 22, 2017, 6:11 am

Version 1.3 is fully detected as runtime :/
