Thread: [Youtube To Mp3 Downloader](#)

iphone5s - November 12, 2017, 12:57 am

Hi HF,

I made this small youtube to mp3 downloader for my brother, so thought of sharing it here. Only thing he wanted is to search and download so no direct url pasting is added.

Features:

- Direct MP3 links for easy downloading using API (no conversation needed).
- Multiple Downloading in a queue.
- Search and download in software only.
- Auto save on desktop with current date. (no need to bang your head for sorting later :p)
- Proper logs display.

Tried it out, works fine.

Why does prompt UAC? (ran in sandbox just in case)

I created this for my brother (who is not tech savvy) so need to create automated folders on desktop.

try using google api for youtube and do the search with http webrequests.

Thanks
