Thread: [\[Official Group\] Prosperity - Recruiting 2-3 members who specialize in crypto trading](#)

SIM-3323508 - November 12, 2017, 8:51 pm

Prosperity Investments is an exclusive subforum within the official HackForums Group Prosperity that focuses on crypto asset management.

Recruitment is pretty simple; select a coin from <https://coinmarketcap.com> and perform a technical analysis.

Orchid - November 13, 2017, 4:48 am

Goodluck to the applicants, this should be an easy acceptance on your part if you truly know what you are doing.

rambolove - November 15, 2017, 10:09 am

Hey, alt trader here, but think my advantage is having relations to some heavy hitters in the browser mining space, including devs of big xmr ones..

I must say, technical analysis is voodoo these days with alts..

SIM-3323508 - November 15, 2017, 10:12 am

Our general recruitment is here: <https://hackforums.net/showthread.php?tid=5749928>

Prosperity Investments is a group of crypto investors inside the Prosperity Group, we just have a private subforum where we make calls and such. Having a couple more people in the investment group who do charting and TA would do a lot of well for us :)

Bombaclut - November 15, 2017, 10:19 am

Coin chosen: <https://coinmarketcap.com/currencies/dash/>

Summary:

Currency name: Dash (DASH), formerly DarkCoin (DRK)

Genesis Block: January 18, 2014

Total Supply: ~19 million

Algorithm: PoW (X11)

Features: Anonymity, Speed

Website: <https://www.dash.org/>

Technical Analysis:

Along the X-axis is the timeframe and along the Y-axis is the price of the security. DASH keeps on being exceptionally unstable, at first endeavored to rally on Monday, yet wound up shaping a negative looking light. I think by the day's end, we will end up coming to back towards the \$450 level, where we should see some purchasing weight. Being patient and waiting for a bounce or a supportive camera such as a hammer should be the best way to play this market.

Summary: STRONG SELL

Moving Averages: SELL | Buy (5) | Sell (7)

Technical Indicators: STRONG SELL | Buy (0) | Sell (7)

Edit: Bare with me as I make it longer.

Very nice, this is a good first application!

If only the user wasn't the most despicable user on the forum, then maybe. I'd be appalled to have him represent my group.

I haven't really seen him around, but his application was decent and I guess that is a major factor.

Consider yourself lucky.

He's had other accounts he's scammed on, proclaiming he didn't care about paying them back. Of course he eventually did.

He scammed for like 10 bucks.

SIM-3323508 - November 15, 2017, 9:03 pm

Keep this thread open for applications only, thank you.

Crypto Elliot - November 16, 2017, 6:24 am

I'll pick DCR for my technical analysis.

Possible Bearish Cypher forming, meaning that it could morph into a shark or become invalidated due to BTC price movement.

Key Points: Perfect 38.2% retracement of XA

Minimum 113% extension of XA

DCR has a lot going for it, atomic swaps and possibly news about a decentralized exchange, so it'll be one of the big players imo.

Position 1/3 filled

Looking for 1-2 more users who can contribute some TA :)

TheChi?f - November 17, 2017, 6:04 am

Who tf made this UB for you MoneyMan?

Right? And remember the fidget-spinner recruitment thread that Royalty had? That recruitment thread was of the highest quality.

@OP

Good luck finding some good recruits.

Elitas - November 17, 2017, 10:53 am

I haven't actually profited a lot from cryptos (only a few thousand) but this is because I only ever invested a few hundred \$. The rest of my cash is in property so I didn't have much capital investment left for cryptos. If you actually examine my ROI %, I'm sure you'd be somewhat impressed with my knowledge of investments.

I don't have any statistics easily available but would be willing to send you proof in PM if need be. Good luck with the group nonetheless.

M?xim - November 17, 2017, 11:17 am

Glad to see that you have a crypto group. No doubt that it is in the right hands looking at your project(s).

Good luck.

SIM-2501407 - November 18, 2017, 1:13 pm

Although I have been approved to own a usergroup and have been in multiple usergroups, I still do not see the value in joining one. Most, if not all, of the time, usergroups do absolutely nothing. Hmm, I guess I will give this a go just for hell of it.

Didn't know what to do, so I let random.org decide. Fun fact, there is a Valor coin.

<https://i.imgur.com/eBTkDgo.gifv>

-Start of Analysis-

Symbol: XZC

Chart:

Spoiler [\(Click to View\)](#)

Reasons for Spike:

At first glance, it seems to be a pump and dump, but that is not that case at all. This cause is mainly due to an update regarding nodes, and they also got listed on a few sites.

<https://www.youtube.com/watch?v=hbV7LWdZKSs>

10/10 recommend watching this video. Watched it twice just to soak up everything.

This is also an interesting video about how their mining works:

<https://www.youtube.com/watch?v=z0yqP-TWC8c>

They made it so ASIC does not work for Zcoin.

What is this node update?

Basically if you have 1,000 ZCoins it is 1 ZNode. Positive side to this is that ZNodes get 30% of the block reward.

There is a big downside ZNodes; you are put into a queue for rewards and if your ip changes or you disconnect for whatever reason, your spot may go away.

Before and After ZNODES

Spoiler ([Click to View](#))

Prediction:

Longrun - Zcoin, despite the confusion with ZCash, will continue grow and raise in price. Not having ASIC's may hurt them in the longer run and it is hard to predict an unknown or "off-brand" coin, but I think there is a future for this coin.

Short Run - They are going to continue to be added to Binance and other websites. With these updates coming along nicely, I predict to see Zcoin to continue to rise in price. I don't see it going up to \$40 quite yet, but I can certainly see it hitting \$30 (ball park \$25 - \$35) within the next week. Probably will go back down soon after (I doubt it will drop below \$20) and we may see some 'resistance' to get that price level (\$24-\$30) again.

I could talk about the graph more - look at the trend lines, and so on and so forth, but that shit is boring and is something you should be able to eyeball.

- End of Analysis -

Other shit:

Spoiler ([Click to View](#))

<https://hackforums.net/showthread.php?tid=5266568> (Exchange thread)

<https://hackforums.net/showthread.php?tid=5513175> (When I first got into researching cryptos; my first prediction)

<https://hackforums.net/showthread.php?tid=5518429> (Huge thread that is outdated like some shit and I made the idiotic choice of putting every almost altcoin on a list, lol)

SIM-2501407 - November 22, 2017, 7:21 pm

(Nov 18, 2017 02:13 PM)Valor. Wrote: [\[CITE\]](#) -snipQuick update:

XZC has gone up to \$38.47 - nearly a \$15 (a 50% increase) since my post. This surpasses my expectations, but predictions were accurate. If you are looking for a solid group that is able to do analysis like the one I did, apply for this group. We all do predictions such as that one I did, but even more complex and sophisticated.

Manipulate - November 23, 2017, 1:27 am

Hold OmiseGo. The coin is bouncing off it's long term support lines. The technical analysis screenshot above says it all if you can understand the charts and basic terms I put. Ignore the \$10 remark, I'm tired and don't know how I came up with a 43% increase. But again this isn't investing advice.
