The image you provided does not help me understand exactly what you want done, but there a bunch of PDF libraries for PHP that can help you create PDF's with the data you provide them. Here's one of them: <http://www.fpdf.org/>

For pretty-looking documents, and if you have a local server, or a VPS, you could try using LaTeX. I did a project with that a while back. The PHP script writes LaTeX code depending on the data I send it, and I run/compile that code with latexmk to provide me a good-looking PDF file :)

Ok? Cool? Then do it....

No, we aren't going to do it for you.
