Thread: [@media min/max working on desktop resize, but not on mobile](#)

Not Your Average Orange - November 19, 2017, 3:43 pm

Hello, so I've got this website setup for testing:

<http://sneaky-mother.surge.sh/> (subdomain name was random)

If you look through my messy code (quickly compiled all files into an index.html) you'll see some media blocks. If screen height is < 740px, the nav bar is supposed to disappear, and a hamburger appear. It works on desktop, resizing the window. However on mobile, nothing happens. Can someone help me with this?

Add this meta tag and it should work.

Code <meta name="viewport" content="width=device-width"/>

Thanks, works.
