Thread: [\[SOLVED\] PHP code on XAMPP localhost server](#)

v47093 - November 20, 2017, 4:58 am

Hi, there.

'echo' command is not returning anything

-I m using xampp

-my pc as server\\

-Using HTML code to view in web page

-Everything works fine , except messages under echo do not show up as it expected to be.

Have a look :

<https://pastebin.com/aNLPbViW>

If u have any suggestion, please post reply.

Are you 100% sure your PHP is Running ?

Tried running them through online compilers, shows unknown undefined mysqli_connect error

Which is acceptable. Rest is fine

As for now, I m still stuck mate :/

your preg_match needs to be changed (since it returns an int and not a bool)

Code if (preg_match('/[A-Za-z0-9]/', \$password) != 1) {

My guess (I haven't looked at your code) would be that your php is throwing some sort of Fatal Error and you don't have error reporting on, so you don't see anything happening.

Add these 2 lines at the beggining of your php tag:

PHP Code

```
<?php
error_reporting(E_ALL);
ini_set('display_errors', 1);
```

And try running it again, and see if something shows up :)

Elite Hacker 69 - November 20, 2017, 6:10 pm

which echo isn't working?

Squito - November 20, 2017, 11:30 pm

Potential issues:

1. The extension of the file is not .php (but I guess this is not the case, because the echo wouldn't be processed either)
2. You are using an outdated PHP version, which is under 5.5
3. Mysqli is not a loaded extension

Without the actual error message(s) I'm just guessing.

v47093 - November 21, 2017, 12:56 am

Solved guys.

It was just the mismatched variable name
