Thread: [Thread Editor Bugging? \[SOLVED\]](#)

Effexion - November 23, 2017, 2:18 am

Just went to edit my sales thread. I just moved the vouches from the top to the bottom and the whole thread went ape. Text shifted, colours were lost and the links that were in images were duplicated to the side of the image and a whole manner of other stuff. If you want to see what I mean, the thread's in my signature.

It seems the MyBB code has changed too, weirdly. The [align=center] is done next to each line now.

You most likely copied out of the non-source mode.

[>> Source](#)

Check that and then do it again. If you copy from source mode to source mode, only you can screw it up. Not the editor.

FML, thanks for clearing that up, Maxim.
