Thread: [Need a free WYSIWYG landing page builder](#)

Dr.Hurlu - November 24, 2017, 8:53 am

Something with prebuilt templates would be amazing. I need to export the html and copy it into blogger blogs.

All these instapage and instabuilder and all kinds of instabullshit builders online I've seen so far do not offer the ability to export the html and if they do they charge you hundreds of dollars ... I just don't see how they're worth that much.

If any of you can get me a nice editor with which I could easily build salespages/landingpages/lead pages etc that's either FREE or really cheap (like no monthly fees bs either) i'll reward you with 5\$ on paypal. I'd honestly prefer a software that's downloadable. I already have Kompozer but that's too old school and landing pages built with it look like they're a timemachine to 2001.

EDIT: I found a semi-decent method involving mail chimp. Any of you got better suggestions?

Head to <https://pingendo.com>

It is a new program that's in beta and apparently it is awesome.

Keep you \$5 we are here to help each other bud.

Pingendo isn't really new, I know it from around 2014 or something like that. However, it work's great!

Sure, I saw it was in Beta so I thought it was recent. Yeah it does the job great apparently, I have Bootstrap Studio even though I rather code in editor.
