Thread: [How To FUD with ByteCrypter and Imminent Monitor 5?](#)

pmatt - November 26, 2017, 12:21 pm

What are the best settings for FUD? I found good ways to spread but I lose all because my server gets detect... or I get a connection but after 1-2 minutes I lose the connection...
I tried it with other RATs too but it is always the same...

Can anyone tell me the best settings for FUD?

And to test my server in runtime, I am trying to make like ten virtual machines, all with a different antivirus installed so I can test my file in a realistic way. Is this a good idea?

I have permission to install my server to the computers

Well just about the 10 VM's how about nodistribute or something which DOES NOT share samples.

fun fact nodistribute has been proven to distribute samples in the past.

viruscheckmate is the best site right now afaik. malwr has a really good scanner as well.

CyberStrike - November 26, 2017, 2:34 pm

Ouch that is not good .. like seriously no good (might mess up slightly) an engagement I have been testing backdoors for..

Edit: Faith I just found a few things .. bunch of BS honestly .

pmatt - November 26, 2017, 2:44 pm

I want to runtime scan my server. viruscheckmate and nodistribute only does scantime, right?

I think this website's provides runtime scans but its a bit costly. <https://dyncheck.com/> havent checked it my self tho ?

pmatt - November 26, 2017, 3:14 pm

puh yes thats costly...

I think some virtual machines are the best solution if I cant find a good and not too expensive scanner.

I think if enough RAM is available for VMs, then it will work good and not too slow...

CyberStrike - November 26, 2017, 3:26 pm

pmatt I am thinking of that as well.. here is what I suggest setup the VM get the AV you will be up

against. Also make sure that after it is updated turn off the VM then delete the network adapter and restart it dont scan after you just disconnected from the internet reading over a few things at vault7 it seems that disconnection isn't instant like how we may perceive and some AVs will upload when we think that the connection is cold.

pmatt - November 26, 2017, 4:13 pm

Thank you for your tips sirru5h! But the disadvantage is it costs much time to scan one file...

shanks.goel - January 5, 2018, 4:03 am

Did you find any solution for best setting to make fud?
