Thread: [Free Email Spoofing Program for Kali Linux](#)

Floofer - November 27, 2017, 2:03 pm

What up thotties this is my first post on hackforums so its probably going to be pretty shit.

So I coded a pretty decent program for email spoofing in bash so I thought I would give it out to some nibs so they don't gotta go through the trouble of coding one or learn to code one. I can't just put a link to a file sharing website with the program on it because the program requires a bit of customization. PM me to customize/get the program.
