Downloaded it - wasn't that impressive. Poorly formatted and the information was only slightly more than what you would find browsing the forum. Just my two cents.

Miniii not sure if you checked all content or only last update. The methods i provide are not available publicly so there is no way you can find them here, if you can please point me where.

Everything but your spreading methods are publicly available. The reason I bought this was not to learn a ton, but have all the information about botnets clearly written in one place and I was disappointed to not see any good information. I don't mean to insult you, I just expected more from something titled "Botnet Bible". There's only 9 pages about botnets before you go into your spreading methods. 5 of these 9 pages were copy and pasted from a tutorial on how to setup a VPS. 2 of the pages are how to setup a domain name and connect to the HTTP panel... So 7 pages in the "Botnet Bible" were geared towards people who can't even setup a VPS and point their domain to it. Perhaps you should title it more towards "Spreading Methods" than "Botnet Bible". You should consider updating the formatting on the spreading methods. It's too messy and doesn't follow any basic design principles (think Word document hierarchy).

I don't want to deter anyone from getting it. I enjoyed the resources you provided with it. The pastebin link in the Gaudox fix didn't work, but I was able to find it on these forums.

Overall it's a quick way for you to rake in the coins. I applaud you for that.

Boolean type - December 5, 2017, 7:54 am
