Thread: [Don't invest to mine with cloud server proof inside](#)

n31ght0 - December 2, 2017, 3:06 am

so i rent a cloud VPS to mine moreno and bytecoin. i spent \$1.19 to rent 1CPU shared vps and 6CPU shared vps from [censored]

what i got so far is 0.0021453342 XMR from <https://supportxmr.com> and 22.96276773 BCN from <http://bytecoin.uk>.

the price of 22.96276773 BCN = 0.00019261XMR

so total XMR i got with \$1.19 rent cloud server = $0.0021453342 + 0.00019261 = 0.0023379442$ XMR

the price of 1 XMR currently is \$194.30937783 USD which is with money \$1.19 USD for rent cloud server you can get 0.00612425 XMR if you buy directly with exchanger. That's mean spending \$1.19 USD in mining infrastructure is less we get from buying crypto coin with exchanger/directly. It seem not worth to mining better to buy and hold. How about you that use ASIC mining? is it worth or worthless?
