Thread: [Lite http](#)

DANKMEMEBOY - December 3, 2017, 12:59 pm

what languages would i have to learn to edit the code of lite http

JustNothing - December 3, 2017, 1:04 pm

LiteHTTP is written in c# so..

jasons87 - December 4, 2017, 2:16 pm

Learning Java should be sufficient as well, which is very similar to C#.

(Dec 5, 2017 12:48 PM)?Adderall Wrote: [\[CITE\]](#) Why should he learn Java when LiteHTTP is in C#? agreed I mean the source is there so the java part is pointless

NyQuil - December 6, 2017, 7:35 pm

because theres an android version of it i do believe which is wrote in java

goregasmx - December 14, 2017, 2:50 am

Don't learn java for this. Get some basic knowledge of C# for the server/builder and PHP and HTML for the panel. You also need some knowledge of web admin to setup the panel. Don't bother looking at the builder as that will likely confuse you. You want to look through the 'bot' solution to see how it starts up, runs and communicates. Compare the communication to the php files and see how they interact
