Thread: [Is this risky?](#)

**AlphaTurtle** - December 5, 2017, 3:36 am

So I'm ewhoring this guy and he has some servers. He offered to put miners on them and give me the earnings.

Now here's the part I'm not sure about. I asked him to set up a rdp for me so I can click my ads from a US IP, and well it wouldn't be a VPN so I would be safe when it comes to that and my ads earnings would increase.

My question is: can he find out stuff about me through the rdp? Like IP and whatnot? Is this unsafe?

I don't know if this is the right place to post, but let me know if not and I'll post somewhere else. Thanks!

**Sheeple** - December 5, 2017, 3:39 am

Sure. He can install a keylogger on it, steal EVERYTHING about you and you'd prolly have no idea.

**hckhrt** - December 5, 2017, 3:45 am

Bruh he sure can find out your ip with the builtin Event viewer in windows. So better ask him to set up an admin account for you (So you get the rights to delete event logs) and visit that rdp from another rdp

**AlphaTurtle** - December 5, 2017, 3:46 am

Well what if I'd only use the browser, nothing else, and I would use a VPN to connect to the rdp?

He can log all that shit. Just don't type anything too important into it. Sure your IP would be hidden with an VPN, but not ur fricken keystrokes or mouse movements lol

Well of course I wouldn't be stupid enough to login on anything.
