Thread: [Compile VB.NET](#)

Ombra - December 10, 2017, 3:09 am

I know this is silly but I have this source file that is part of a bigger application, however I only need this compiled and can't find a way to do so via VS.

Can you point me to the right direction?

(Dec 10, 2017 06:19 AM)Orka Wrote: [\[CITE\]](#) Looks decompiled but it may work in a new console application, just paste in the module and add any references. You can remove these assembly markers.

Done but couldn't compile, loads of errors popped up. Didn't expect it was necessary to define them, as those should be referred to default system dialogues

If you don't know what those errors refer to don't even bother making a thread, you're just wasting our time.

If you deem this is a waste of time, you're the first one losing yours by posting.

I never pointed a gun against an head to get an answer

You missed my point, thus proving my post wasn't wasting my time.

Rigg - December 13, 2017, 6:24 am

Looks like a decompiled source code from other's work. I don't know if this is a form of stealing or not but here's my help,

click on the error, it will point you the error. hover your mouse there and it will give you a suggestion (import missing namespace, add missing reference or generate your own method).

Thanks, on a side note I have ownership for this source as I actually paid for it ?

Leo Mikaelson - December 13, 2017, 9:22 am

What actually is it man?

If is meant to be a console application or a form?

INCREDIBLE - December 13, 2017, 9:31 am

I'm positive that you can't do this on your own. better hire someone to do this for you instead.

I'm attempting to do this and some edits by myself because the person I hired become unresponsive, without delivering me a 100% working code.

Probably gonna hire somebody else, but meanwhile I wanted to try myself..

Anyway, let's hope Omni restores the open/close plugin soon, so that I can put an end to this thread.

Anything that you C&P that may throw "undeclared" or "undefined" is probably a missing Import on the top of the file if you didn't figure it out yet.

Any more help i'll be glad to fix those errors for you if you throw me the code.
