I-GANK-I - December 11, 2017, 5:29 pm

you wont get a job here.

you should find recruiters who are specialized in IT Security, linkedin is good for that. but before you even try to get a job in security you should get your OSCP and GPEN or CEH first. it will require 2 year relevant working experience in order to get these certifications so you should start your own cybersecurity company and wait 2 years first.

what you wrote in the thread is very bad you shouldn't write that or talk about "the things you can do", for instance: if you say you are good with assembler they will ask you the definition or difference between JNZ and JMP ... you should be able to answer 'conditional and unconditional jump' and regarding the 0day's you should show them CVE's by You.

They are not interested in arguments and speculations, they want to see and hear facts.
