Thread: [Need to test your RAT? \[Free Test Install\]](#)

TheWolf™ - December 12, 2017, 2:06 pm

Let's get right into it. If you need to check if you have set up your RAT correctly, I will run your stub for you!

If I'm not busy I can also help you set up your RAT.

Cheers, ?

Service Status: Open

Requirements: Neutral or Positive REP

25 Posts, no leechers.

Contact: Hackforums PM, Skype, Jabber, etc. and I will get try to you as soon as possible. When you add me on any of the following. Please fill out this form, it helps speed up the process. Code

What RAT do you use? :

What VPN and DNS do you use? :

What do you need help with [Test Install, port forwarding, ect]:

Terms and Service

OP, I know you're trying to help but all people need to do is download a VM and let it run on there. It'll work correctly.

drillBYTE - December 14, 2017, 3:13 am

The problem comes in where people don't know how to setup a VM or they just too lazy and want other people to do it for them.

TheWolf™ - December 14, 2017, 4:19 am

Yeah exactly, I know people can do it on their own, but if they are to lazy I can quickly run it for them.

Cheers, ?

diagnoza - December 14, 2017, 6:02 am

if you could spare some of your time helping me out set one up I'd really appreciate it :D otherwise i'll just try to figure it out on my own and hopefully eventually send you my stub.

Liliaan - December 14, 2017, 8:46 am

Heyyy, can you please add me on skype man ? :D Have some questions, if you have 2 minutes please ! Skype : noisy.arts

chickendad69 - December 14, 2017, 8:47 am

It's much easier to use Sandboxie.

__Digital__ - December 14, 2017, 8:52 am

I would suggest you all not have someone run your file unless you don't care about your dns getting leaked among other things. The best thing you can do is create a virtual machine and do your testing that way.

diagnoza - December 14, 2017, 8:59 am

how about running it on a second pc/ laptop(with no vm)? might there be any problems removing such later on? I get it that as long as I am in control of it, nothing bad can happen, right? :D

ten85p - December 14, 2017, 9:43 am

i need help, please add me on skype: ten10n

Purple Kief - December 14, 2017, 10:15 am

Under no circumstance that I would leak or do anything to your file, just simply trying to help out the RAT section here on HF. But I do understand where you guys are coming from. Hence why I will be closing this thread to prevent any further conflicts. :/

Cheers, ?

We are not really saying you have to close the thread, we have seen it many times where someone opens up a service of your nature and people get their dns's leaked along with ports and much more. Helping the community is great, just be careful and make sure your properly setup.

TheWolf™ - December 14, 2017, 11:25 am

(Dec 14, 2017 12:20 PM) **__Digital__** Wrote: [\[CITE\]](#) We are not really saying you have to close the thread, we have seen it many times where someone opens up a service of your nature and people get their dns's leaked along with ports and much more. I get it that as long as I am in control of it, nothing bad can happen, right? :D Yes, you could do that, if you uninstall it from your RAT then

there should be no problems with your computer. Yes, if there isn't anything bined to your stub then you should be fine since you are the only one controlling it.

I doubt people would really want to get his information that bad. Nothing happened to me while I ran an automatic service on my spare laptop.

This got me thinking if I should clean up my code and release it to the public for free ?

TheWolf™ - December 14, 2017, 1:23 pm

Cheers, ?

CyberStrike - December 14, 2017, 6:25 pm

Make sure also that you do not allow any sharing between the host and guest OS's Like not even copy and paste, also the hypervisor should be up to date. IMO this is kinda a big risk.

TheWolf™ - December 14, 2017, 8:10 pm

And sometimes VM's eat all PC space.

Vouch for OP. A good helping member.
