Thread: [Powershell knowledge needed!](#)

samcharter - December 13, 2017, 2:35 pm

Hey guys!

I have a pretty important powershell script to due that's due for school by friday. I'm having a lot of trouble understanding and if somebody could help me by teaching me or something like that would be greatly appreciated. It has to do with:

Powershell scripts
the Event log
Replacing strings in text documents using powershell scripts
Automated installation of software using powershell scripts with a few commands to create
Make a powershell script that scans the installation of a web server, what OS it has and determines its software.

Pretty much all the students in my class have little to no idea on what to do, and it's the same situation for me. If needed I could pay to compensate for your time.

Thank you very much!
