I want to learn how to hack. I have been reading through this forum on were to start and people have recommended start on an ebook on networking. If someone could reccomend a good ebook to start with that would be great. Thanks in advance.

I would like to learn about hacking networks and getting access to peoples computers. I already have an understanding of these topics but i would like to expand on them and learn more methods.

Check out Amazon, they actually have some books about hacking etc. Or check out Udemy (warez disallowed) and grab a Hacking Course.

Ok thanks will do. I have already bought a hacking course on Udemy (warez disallowed). It's an ethical hacking course that is were i learned about backdoors, hacking networks and more. The course has helped me alot on understanding it but i prefer reading things and i think i can learn more by reading. Thanks for your reply.
