Thread: [\[FREE\] Proxy Checker made in Python \[FREE\] \[Open-Source\]](#)

Ungifted - December 15, 2017, 5:14 am

I am making a little project in python to check proxies. Currently I am on version .01, as I've only just got the first module working. However if you would like to add to the code or just keep up to date with a simple program and it's progress.... Here is the github:

https://github.com/RobertLD/proxy_checker

Currently in the process of being added:

- Scraping functionality
- Speed Checking functionality
- Type of Proxy
- Anonymity Measurement
