Thread: [Country Lock Disabled](#)

Omniscient - December 19, 2017, 3:03 pm

Due to some issues with IPv6 compatibility with my country checker I have disabled the plugin for Country Locks on accounts.

I will likely fix that in the future once other elements are fixed and I can also add logging like 2FA for Trust Scan.

For now, CCLock is disabled.

Jimmie - December 19, 2017, 3:22 pm

Hopefully you fix it that was a good secondary security for people who doesn't use 2FA.

webdev77 - December 19, 2017, 3:25 pm

Good to know. It's a feature that does give a small piece of mind knowing it was working.

Elitas - December 19, 2017, 3:27 pm

I use both ipv6 and country lock and have never had any issues before with it. Not sure if that helps or anything, glad to hear you're sorting the site out for ipv6 anyway.

Omniscient - December 19, 2017, 4:00 pm

Yeah, I'm just updating some backend tools that help me with administration and will effect things like Trust Scan and Country Lock. I have to make sure the tools work properly for these functions to work properly.

solitario_moder - December 22, 2017, 1:17 pm

the problem is that some pay for others' mistakes.

My country was blocked "Brazil" and my original account was also ?

Sorry for your english
