Thread: [IP shown on User Cp](#)

popir - December 20, 2017, 11:18 pm

Hey im kind of confused cause normaly my logins look like this

12-20-2017, 07:40 PM

xxx88.88.xxx

12-20-2017, 12:40 PM

xxx88.88.xxx

now since yesterday they are looking like this

1234:123:1234:5554:111a:aaaa:xxxx:xxxx

12-21-2017, 02:16 AM

1234:123:1234:5554:111a:aaaa:xxxx:xxxx

12-20-2017, 10:10 PM

1234:123:1234:5554:111a:aaaa:xxxx:xxxx

im a little confused someone can tell me why is that?

Jisatsu - December 20, 2017, 11:19 pm

ipv6 instead of ipv4 is being used.

popir - December 20, 2017, 11:20 pm

Your ISP is using IPv6, which is completely normal. Most ISP's will assign you both anyways, and it won't affect anything.

Sometimes when I'm checking my ip, 1 site will give ipv6 address, another site will give me ipv4.
Just make sure it's your ipv6 address, through cmd > ipconfig /all.

Hope that helps.

ok thx for that answer :)

M?xim - December 21, 2017, 5:51 am

Oh. Hm.

HF hasn't been compatible with IPv6 before. Maybe it has been routing it to an IPv4 for you to be

able to access the site.

[But now it's compatible.](#) So, it uses your normal, which happens to be IPv6.

Only explanation that i can come up with.

Salt peter - December 21, 2017, 6:00 am

As others has said it isn't anything unusual with Omniscient adding support for ipv6. Do some reading on ipv6 addresses if you have the time.

popir - December 21, 2017, 9:47 am

now its back to ipv4 i think... this is a little confusing xD

OneManCrowd - December 21, 2017, 4:24 pm

I believe Omni recently enabled IPv6 for Hackforums, so that's what you're seeing there. It's nothing to worry about ?

Omniscient - December 22, 2017, 1:04 am

Since we now accept ipv6 connections it's likely your ISP is routing you through ipv6.

<https://whatismyipaddress.com/>

Is your IP v4 or v6?

popir - December 22, 2017, 4:28 am
