Hello, is there any good program to open a big password list without problems? (lags, etc)

mstrmnn - December 21, 2017, 8:27 am

What's your Operating System?

On Windows I like Notepad++, on Linux I would try SciTE. Most important is the performance of the hardware. I run Linux on old and slow hardware, it takes a lot of time to open huge files there. On my Windows machine with i7 and 16 GB RAM I can handle those files much easier.

Wikipedia offers a comparison of text editors:

https://en.wikipedia.org/wiki/Comparison_of_text_editors

Ewww usually I tend to use cat and pipe that to less for large documents. if you want to say append passwords to a large list from one you have compiled I would say

```
less filename.txt >> biglist.txt
```

If say adding one or two passwords extra you can use echo. I try not to have big lists open in a gui editor since it can really be quite laggy.

Emeditor works well with big data for me

PerfectStorm - December 22, 2017, 1:24 am

UniversalViewer is free and works like a charm. I cant remember where I downloaded it but this is the file: <https://www.sendspace.com/file/djwn17>

Can open 100k lists without any problem
