Thread: [Botnet guide \(which Botnet, VPS, security, ...\)](#)

Nighshade_ - December 28, 2017, 2:10 am

Hi Guys

Is there some kind of a guide which provides info on how to set up a Bnet?
I'm talking about which software to use, best VPS, general security etc.
I'm new to this and I want to gather some more info.

Thanks a lot!

Ye I'm currently doing that but I thought I'd just ask since a guide would be much handier :)
Thx!

Trust me there are plenty of guides on how to setup a botnet on this forum.... HTTP/IRC etc.. good luck on your journey .. and as for best security ya kinda wont find to many HQ tuts on that as well as the best servers to use and offshore this and that nobody want's to really give there secrets away so my tip is don't trust anything until you do your research.. people on this forum and in life wanna see other people fail.. Goodluck ?

Cyberbunker is not what it was in the past... I will not recommend them but you can find some others hosting company in russia/pakistan/Afghanistan who don't care about international laws.

they're all old ??? ???

Brastafant - May 21, 2018, 2:23 pm

Probably, the botnet bible is what you are looking for.

venyas - July 12, 2018, 12:01 pm

botnet bible is a good start
