Thread: [How can i show the change icon dialog box, with a vbscript or a command line ?](#)

Hackoo - December 29, 2017, 12:42 am

Hi ?

How can i show the change icon dialog box, with a vbscript or a command line and use informations throw it in my vbscript in order to let the user choose what icon he wants to set from the change icon dialog box ?

Hackoo_Change_Icon_Folder.vbs ([Click to View](#))damn hackoo its been a while nice to see u on here again,

i just got a working laptop again so i can start coding again.

when u get an answer on how to trigger the windows select icon dialoge box in vbscript msg it to me i wanna know how to do that .

its probably done with a command-line argument passed to something like explorer.exe, control.exe, or rundll32 but thats just a geuss

no easy way to do it i think

you can use site like http://help4windows.com/windows_xp_shell32_dll.shtml

http://help4windows.com/windows_vista_shell32_dll.shtml

http://help4windows.com/windows_7_shell32_dll.shtml

http://help4windows.com/windows_8_shell32_dll.shtml

and grab the icons by thier os & index

for example win 7 folder icon http://help4windows.com/icons_win_7/win7_ico_shell32_dll-003.jpg

Edit - you can use powershell to do it <https://stackoverflow.com/a/28091056>
