Thread: [What popular websites and email services can be hacked?](#)

fogstone - December 30, 2017, 4:15 pm

I wanted to ask this because I know that its near impossible to hack Facebook unless you are among the best.

That said, which popular social networks and emails are hackable? Could someone please elaborate?

Also, how good does someone need to be to do it?

supaturk - December 31, 2017, 8:18 am

That is a stupid question. Every websites can be hacked it doesn't matter if it's populair or not.

You need to master the basics to be a good hacker.

But then why do so many people say that Facebook can't be hacked? I was thinking of making it my part of my goal to be able to hack all major popular sites but so many people say here that that's not possible.

Why the fuck are they saying that? If your right then they are retards.

Your head is in the sand dude. Youre asking a vague question like "Which banks can be robbed"

not everybody is robbing banks to find out, and if they are they aint telling you.

Anything is possible, but also you shouldn't get into hacking to try to hack facebook. It wont happen.

They say that because they don't have the ability, mindset, nor knowledge in order to do so and they think they're the better than everyone else.

Their mindset is stuck to "If I can't do it, you can't because I'm better than you."

It's possible, but with their 24/7 security monitoring, it's very difficult.

Good advice.
