Thread: [Physical Access, Now What?](#)

ScionOfOmega - January 2, 2018, 9:02 pm

If one has physical access to a computer what can someone do to best screw it up or screw the person who owns the computer? Also how would someone go about doing these things?

Things like:

RATs

Keyloggers

Call Home Scripts

etc...

Discuss!

Mine off crypto from it.

Profit.

I suppose but I thought it isn't as profitable anymore to mine? Or is that just really for bitcoin at this point and currencies like Monero and Ethereum are still viable?

It isn't profitable if you're expecting overnight returns, or if you own the machine. Assuming you don't own the machine, you're basically making free money off his machine.

If you wanna do something more stupid though, just RAT the computer and wait for something interesting to happen (owner types credentials, or get him doing something he shouldn't lol). Browse through his files, maybe there's something interesting there.

Aside from that, I don't really know what else you can do from it.

Go and make a quick digital keyboard (for a cheap rubber ducky) and then make a payload to do whatever you want! I have payloads on my github: github.com/Astrades
