Thread: [\[SOURCE\] WebMonitor Android RAT client](#)

SoftPatch - January 3, 2018, 10:42 pm

Sharing the source of our upcoming Android RAT client. It's designed to communicate with a web interface.

Feel free to do whatever you wish with it.

GitHub: <https://github.com/rev-code/AndroidClient>

Note: You will need Android Studio to compile the source.

Nice share OP.

Doubt I will ever use this, but threw a copy to archive anyways. ?

When will be this Android RAT will be launched and will be readily available to use?

INCREDIBLE - February 7, 2018, 7:55 am

care to share some screenshots?

SoftPatch - February 7, 2018, 10:57 am

This is the client (non GUI, so nothing to take screenshots of) currently being developed and intended for connecting to a web interface (Revcode webmonitor).

There is a documentation included for anyone interested in making it connecting to their own designed web interface.
