Thread: [\[easy\] resize avatar to set HF \[easy\]](#)

Pirate - January 4, 2018, 4:18 am

hi, when I download and upload the picture I want as my avatar simply, it seems like a square crop..I need the image's height to fit the HF screen like a perfect suite. That too without losing the image clarity. Template is in the spoiler.

Spoiler [\(Click to View\)](#)

Request : to resize this picture to a HD hackforums avatar.

Size : You need to fix the size with some professional co-ord.

Link :

if it is possible to focus only the boy and set the BG color to transparent HF grey, that would be cool.

Thanks! :-)
