Thread: [\[VB.NET\] How to compile \(Remote Administration Tool\)](#)

Tom2565 - January 4, 2018, 5:22 am

Hello,

im looking for a better way than using EOF to compile a Stub.exe

I heard about CodeDom, anyone has a example? Or any other ways to put strings into a file?

Greetings and have a nice day.

EOF was old as the other members said and for Codedome, you can read about it on msdn website or read some tutorial here.

Search Codedom then choose the Visual Basic and .NET Framework as forum target.

Of course and there's a lot of way on how you storing things in your stub. Just search around as it is all available here.

Can you link me some other methods? I will try codedom now. thank you for your time!

Ninja - January 4, 2018, 10:35 am

If this is above your head, then don't write these kind of projects.

Would you bother replying to my PM's & Discord msgs?

Before you took my money, you were very much active. Did you just scam me? Shall I open a Scam thread?

I msgd you my github id too in order for you to be able to keep me posted as you asked. But you stopped replying thereafter.

I will wait for your response for 24 hours. I need updates on what is going on with the project. We had an agreement to keep me posted every single day. A day or two here and there is fine. But this is way too much. You are 100% active on HF but you are not replying to my PM on HF or my msg on Discord.

Every action of yours is telling me that you are either not interested to work on this project or you never were.

Kindly reply and tell me if you want to work or not. If not, Give me my \$750 Back. Period.

I am sorry to Msg "Ninja" like this. I have no intention to bother you with my shit at all. Its not a big deal though. Just trying to send him my msg, as he aint replying to my personal msgs or discord. And I have spent quite a decent amount of money. Hope you understand this much, eh!?
Thanks!

Thanks!

I tried to PM you multiple times but your inbox was full. Don't blame me for that.

Best solution use Mono.Cecil, check njrat's builder source code

Tom2565 - January 5, 2018, 2:44 am

Thank you for your help! I will do. I just found old source codes of it where the coder used EOF.. but i hope the best

You just made my day :D

Honestly, don't bother with EOF. CodeDOM is a lot better.

please help with good Remote Administration Tool with crypter to go with... i want to purchase Remote Administration Remote Administration

Adderall - January 8, 2018, 8:47 am

You can also use this [method](#) for storing settings in your stub. It will also work with crypters and imo is very easy to use and understand. You just have to add a function in your stub to get the settings stored in the resources and a function in the builder to add your settings accordingly to your stub. Hmu with a pm if you need more info on it.

trashposter - January 8, 2018, 9:46 am

Bro if you want to create your own RAT, your output file should be FUD. Why buy a crypter if you can code your server from 0 ?
