Visual Miner & Monitor

Changelog

07/01/2018 - Initial Release

08/01/2018 - Critical Update for single GPU users

09/01/2018 - Kraken API Introduced

11/01/2018 - EWBF Monitoring Optimizations

(In Development)

VMM is a visual based application to make mining slightly easier for those less savvy in the setup of mining, however not limiting in regards to each mining applications options.

There is also a real-time monitor for CoinMarketCap of which you can set Alerts in form of "on-screen" or email with plans on adding multiple direct exchanges in future.

Requirements

.NET Framework 4.6.1

<https://www.microsoft.com/en-gb/download/details.aspx?id=49981>

Telegram Support & Chat

<https://t.me/visualminermonitor>

Download Links:

<https://mega.nz/#!48kUFSra!SmNGGUEShxuC41v3X0pUDJ6A5rs78wlaDxGeSMlhRxk>

Monitor

You're able to select any coin currently available on CoinMarketCap, and monitor each one individually in a compact area opposed to page-by-page.

You can set alerts for all coins, simultaneously:

USD Low Change

USD High Change

USD 1 Hour % Change

USD 24 Hour % Change

USD 7 Day % Change

EWBF Miner

Mining with EWBF is exactly the same as it is without the application, however you will also have full statistics (again) in a compact area making it easier to read quickly.

The latest version of EWBF comes packed in the download, however you can freely download it

yourself and navigate to it's directory.

There are 4 profiles by default, all of which are editable (ZEC/BTG).

The EWBF Miner by default does not show, however you are able to change an option for this.

There are plans on adding Claymore Miner for AMD cards, and i'll update this post when that time comes.

Top Up: Topping up is a flat-fee for using Visual Miner whilst mining.

With 3 GTX 1060 6GB Cards I average at 990 Sol/s which is around 270 Shares per hour. The Dev fee worked out to be 0.00111%.

Options

You can fully configure your Notifications for each type, and there are also a few notifications for basic operations / actions.

If you want to disable Email-notification, simply remove your email address from the monitor tab.

Kraken Exchange

You can monitor all data about current exchanges on coins from the Kraken Exchange, in real-time. You're able to select the data you wish to see, and set a lower and higher alert for every single one.

ZEC: t1M1SxAhiakgk3cqjQGVRkN9bkeHso3bcNV

LTC: LgDf1GER9DNioaPJAY8iy2MHVoJZCKyu1e

If you find any bugs, please let me know and i'll have them fixed as soon as possible.

Thanks for using VMM :)

Cheers Zinkii, very solid post. Just setting up my mining rig. Will definitely be giving this a go! :)

Thanks, please do let me know if you find any bugs! (early development)

Good luck with your rig!

Just finishing up on adding the Kraken API now to monitor it's exchange tickers in real time.

Could do with some debug testers if anyone is interested.

.Zink - January 9, 2018, 12:43 am

Kraken API Monitor has been added, you can see all exchange rates with all of their data included, filter the types you wish to see, and set an alert of a low/high change for each data set.

See the information & screenshots in the OP.

Is there a possibility that you will be adding a feature to the miner that it will show earnings? (would be cool if you could do 1hr, 6hr, 12hr, 1 day. Not sure how you would implement that but it would be cool! ?

I will try this once my nicehash pays out the minimum! (only on like \$2 USD per day) single 1050Ti lmao.

Thanks for the upload & share! ? will let you know if I find anything wrong with it or issues/bugs etc.

Thanks for the upload & share! ? will let you know if I find anything wrong with it or issues/bugs etc. Excellent idea!

I'll add that in for the next update. :)

To spin off a little, the generalized estimated profits are done by very mean averaged values across multiple exchanges usually.

- Do you think it would be better to just go with this figure to match the shown values on the pool, or have direct links to different exchanges for actual estimated earnings?

Thanks for giving it a go!

have direct links to different exchanges for actual estimated earnings?

Thanks for giving it a go!

I personally think both would be a great idea! Only if you can implement both? Showing the figure from multiple will give a reasonably accurate idea. but giving direct link will narrow it down for people if they want specifics! I think you have something good going here! ?

I can keep giving ideas about what I would want implemented? (maybe in the future you can create your own pool and website that involves your program?) Depends how popular you want your program to get!

Can also have a Pool section in the program listing your suggested pools etc. So it is somewhat noob friendly? I will keep throwing ideas when I think of them!

You're more than welcome to keep throwing suggestions my way, however i can't guarantee they'll be added - I'll do what i can though. :)

Creating a pool is... if anything a long way off, I've not even considered it to be honest. I don't think i will consider it either unless this application has 500+ daily users avg.

There are some profiles that you can select already, each are setup to different pools.

Though i was tempted to setup some sort of "wizard" with a simple setup such as:

"What coin do you want to mine?"

"What is your wallet address?"

"Select your gpu brand: AMD/NVIDIA"

"Select your preferred payout scheme: PPS, PPLNS, PPLNT"

List goes on but it'd create a mining profile for you basically, so users that know very little about mining could still mine.

.Zink - January 11, 2018, 12:03 pm

Update

Optimizations in the EWBF (nvidia) miners monitor.

More progress towards adding Claymore for amd

Started working on adding claymore dual-miner

Kraken monitor optimizations (kraken is currently down however)

darkvendetta1 - April 15, 2018, 6:37 am

im interested in the miner, i would want to if it can mine zcash?
