Thread: [If I know gmail address of someone, what's the best way of installing RAT?](#)

Werootoot - January 9, 2018, 1:37 pm

So if I only know the gmail address of the target, what would be the best way to install RAT tool on the target's pc?

Can someone point me to the right direction please?

Malicious` - January 9, 2018, 1:38 pm

SE'ing but we cannot discuss that on this forum.

Social Engineering would be the best option OP, if you can get the victim to open a file, you're good to go.

Thanks. So the best way of doing this is by sending a PDF attachment? Does gmail detect it at all?

Only if you don't encrypt your executable properly, since gmail will scan your attachments for malicious files. In my experience doc macros work better, but you have to be creative to make the mail and document appealing.

bind client with any file

???

Profit!
