Thread: [Check to See If Your Protected Against Specter/Meltdown](#)

[BLANK] - January 11, 2018, 8:17 am

Just wanted to share with the community that there is a good Powershell module that you can run to verify if you are protected against Specter and Meltdown.

Source: <https://support.microsoft.com/en-ie/help...-execution>

Code PS C:>Import-SpeculationControlSettings
After importing the module then run it with:

Code PS C:>Get-SpeculationControlSettings

If you run into a security issue where Powershell won't run execution scripts then simply use:

Code PS C:>Set-ExecutionPolicy -Scope Process -ExecutionPolicy AllSigned

Then run the above code again.

Hope that helps everyone.

Thanks Aura, I actually got the info from work and was passing it on. I included the source in main article now.
