Thread: [Experienced Mining Help Desk](#)

The Illusionist - January 16, 2018, 10:46 am

No fancy thread design, just pure helpdesk & knowledge.

Either Private Message or post below any mining-related questions and I will answer them.

My Experience:

- Started mining 6 Months ago
- Own over 35 rigs
- Renovated a regular building into 35 mining rig proof (power, cooling & security)
- Build/Helped build (support) over 100 rigs

FAQ:

What rig set-up do you use/recommend?

Spoiler ([Click to View](#))

1x GIGABYTE GA-Z270XP-SLI

1x Intel Celeron G3930 1151

1x 4GB DDR4

1x Corsair RM850i

1x 32GB USB

6x NVIDIA 1060 6GB any brand (recommend EVGA, cheap and reliable)

6x SATA Pci Riser 6 pins

Why do you prefer NVIDIA over AMD?

It's true the AMD has more hashrate (depending on the card roughly 7-9% more) but....

AMD's literally use twice as much power. 6x 1060 can run on 510W, 6x AMD's run 1000W+

This means you can buy a cheaper power supply when making an NVIDIA rig and you save yourself tons of money in the long run with power.

Oh and, NVIDIAs are more often in stock then AMDs.

Can you help me build a rig?

Yes but not for free, I answer any mining related questions for free but actual 1 on 1 support for a full rig building I have a service for check out;

<https://hackforums.net/showthread.php?tid=5664717>

What currency do you mine?

I currently mine MNX trough the Optiminer software, for more info check out;

If i may ask how much do you make per 1060 a day ?

Average

Average
Per Graphic card? That would be roughly \$4

Money Man - January 16, 2018, 4:06 pm
Your cards are all overclocked?

The Illusionist - January 16, 2018, 4:17 pm

Yes sir.

Money Man - January 16, 2018, 4:18 pm
vouch for my man here. Knows what he's doing

PHANTOM - January 17, 2018, 3:53 am
So with 1060 6gb cards I can get close to 4\$ per card mining mnx?

westwol - January 17, 2018, 5:24 pm
Is there any BIOS configuration for this MOBO? Currently having issues setting up a 6x GPU RIG with the same specifications.

4 usd a day has to be fake. A 1060 gets at max 23 mhs ETH which equates to about 64 dollars with aprox energy cost. Mining zcash it is 280 sols aprox which is less than that.

not fake mate, actually very easy to see 4\$+ on a 1060.
on nicehash I have seen payouts of a 1060 go upto \$5.20
right now with everything in a shit storm nicehash is paying 3\$ per card.

I will PM you the correct BIOS update.

(Jan 17, 2018 08:28 PM)FatSac Wrote: [\[CITE\]](#) 4 usd a day has to be fake. A 1060 gets at max 23 mhs ETH which equates to about 64 dollars with aprox energy cost. Mining zcash it is 280 sols aprox which is less than that.
Why would it be? It's not that hard to achieve \$4 a day if you look past the main mining coins.

What OS are you on?

i know linux has better performance but still the issue with getting the cards to stay undervolted without custom modding the straps is a pain in the ass when you're dealing with setting up 10k cards.

for a more easier option you can also try the illusionist's software optiminer, ethos based. pretty good profits on there too for 1060s.

Well not really much undervolting needed with the 1060s.

Now think the majority of our cards are 580s and 1070 Tis these things like to eat kwh unless undervolted.
