Thread: [My Stab at Stellar Coin Secret Key Generator...](#)

Loopy For You - January 16, 2018, 9:25 pm

For educational purposes only...

Well I wanted to see what I can do with generating Stellar Secret Keys and I think I found a good brute forcing method, but once I found out that Stellar API doesn't let you easily check an account balance with the secret key I found it not as useful.

HTML Script that I created to study the Secret Keys: <https://pastebin.com/EZZa20S1>

-I found out that it always starts with 'S' and the second letter is always between 'A-D'. Once we get to the Third letter it can be A-Z or 0-9. There are 56 total letters/strings....

Simple Python script to (try to) generate an existing secret key: <https://pastebin.com/iDGnVnM3>

-Requires EXREX Module pip install exrex

I knew I wasn't going to be able to brute-force any secret keys, but I was hoping there was going to be easy API access for checking balances via secret keys (if the key existed) :(

I guess I'll have to do it the hard way and make a script with Selenium and BeautifulSoup to paste in the regex generated secret keys manually [here](#) and check if there is an error message or not, then repeat.

Posting this because I'm proud of my accomplishment after learning Python for ~2 weeks. I learn better by showing and teaching.
