Thread: [website blind sql](#)

blackcoder00 - January 18, 2018, 4:23 am

i was into a site vulnerable sql Blind i have dump the User name and the Password then i have find the CP i wanna know how i can upload my shell if the uploader don't support php file ? only JPG,PNG extention is there a solution i can bypass this problem?

[BLANK] - January 19, 2018, 1:10 pm

This can normally be done by modifying the name of the shell name. For instance if I was going to generate a new weeveely shell but I know .php would be flagged I would save the file as "backdoor.jpg.php" because a lot of filters will just see the .jpg and let it upload.
