Thread: [Extremely Simple Folder Spammer](#)

decended - January 18, 2018, 11:08 pm

I've been just goofing around with the "mkdir" function and just decided to make it do basically infinite folders using the "%random%" value. If you ever want to use it the code is below, thanks for looking. Any and all feedback is welcomed.

```
Code @echo off
color 0a
:gen
echo Generated! %time%
mkdir %random%%random%%random%
goto gen
```

Additionally you can use something like

```
Code @echo off
color 0a
set number=1
:gen
set /a number=number+1
echo Files generated: %number%
MD %number%
goto gen
```

Not much different I know, but this will work a lot faster and also display how many folders it creates.

You can limit how many it makes too by using something like

```
Code @echo off
color 0a
set number=1
set limit=50
:gen
set /a number=number+1
echo Files generated: %number%
MD %number%
if %number%==%limit% goto exit
goto gen
```

Or for a non-preset variable with a limit you can ask the user how many they want created by changing set limit=50 to

```
Code echo How many folders do you wish to create?
set /p limit=:
```

:)
