Thread: [\[HTA\] Hackoo Icon Folder Changer](#)

Hackoo - January 19, 2018, 10:59 am

Hi ?

I asked before for help to find out a solution of this question : [How can i show the change icon dialog box, with a vbscript or a command line ?](#)

Finally, i got a workaround with HTA to display and choose an icon to be changed for the default folder.

I want to thank the member [HFDone](#) for his help and how he directs me in the right direction to achieve this project ?

Here is a screenshot of Hackoo Icon Folder Changer.hta

And here is its source code, just click on the spoiler to show it ?

Just copy and paste this code with your notepad and save it as Hackoo Icon Folder Changer.hta

Spoiler [\(Click to View\)](#)

i guess this is the easy way to do it since you dont need to download all of the icons

it can be done with powershell which will short the code but i dont think its needed when you can do it without

It seems 49-52 don't work (might just be me)

Anyway this is awesome! Keep up the work Hackoo!

Just try to refresh your explorer by killing and re-run it again ?

Hey hackoo voici une erreur générée ^^I can't see your image ?

Can you re-upload it again ?
